PROFILE

Client-focused junior data engineer, trained in Business Intelligence (Technifutur, 2026) after a bachelor's degree in E-Business. At Wavenet, I designed and delivered an on-premise PostgreSQL data warehouse of more than 23 million events for a public-sector client: layered architecture, optimized incremental loading, automated data quality checks, and data preparation for predictive models. I build reliable pipelines from business needs, mostly in SQL and Python, and I set up AI agents for boilerplate code, tests and documentation to free up time for the client.

TECHNICAL SKILLS

DATA WAREHOUSING & MODELING	PostgreSQL · SQL Server · medallion architecture (bronze / silver / gold) · star schema (Kimball) · SCD · incremental loading
PIPELINES & PROCESSING	Advanced SQL (CTEs, window functions, PL/pgSQL) · performance tuning on large volumes · Python (pandas, OOP) · Airflow · PySpark and Databricks (Auto Loader, Delta, jobs)
TESTING & TOOLING	Unit testing with pytest · automated data quality checks · Great Expectations · Git / GitHub (branches, pull requests) · Docker
REPORTING	Power BI · DAX · Power Query · Odoo (Studio, dashboards)
AI & AGENTS	AI agents set up for my data projects: boilerplate code, tests, documentation · I stay in charge of the requirements, the data model and checking the numbers
WAYS OF WORKING	Agile (Scrum) · business requirements analysis · technical documentation · user training

EXPERIENCE

Data & Analytics Engineer (internship)

Aug – Oct 2026

Wavenet, Liège · IT consulting company

DATA WAREHOUSE FOR A PUBLIC-SECTOR CLIENT

- **Explored and profiled** two sources (23 million events, 1.5 million case files) to scope the analysis of processing times
- On-premise PostgreSQL warehouse in a **medallion architecture** (bronze, silver, gold): star schema, SCD type 1 dimensions, incremental loading of monthly deliveries with deduplication
- Cut load time **from 2 h 25 to 11 minutes** per delivery: set-based processing instead of row-by-row loops, anti-joins, single-pass aggregations
- Eight **automated data quality checks** and an anomaly table exposed to business users, which quantified 1.9 million inconsistencies in the source data
- **Machine learning use cases** built on top of the warehouse: training datasets prepared from the gold layer, predictive models trained on historical data
- Seven-page Power BI report with DAX measures delivered to the business, with positive client feedback

INTERNAL REPORTING ON ODOO

- **Release process for reports** between test and production environments: Git versioning and two Python validation tools run before each import, adopted by the team
- Requirements analysis with several departments, data model extensions in Odoo Studio (fields and related fields) and dashboards deployed to production
- **Onboarded and trained a new data analyst** on Odoo and on the versioning workflow, with reference documentation

`POSTGRESQL` `SQL` `PYTHON` `GIT` `DATA QUALITY` `POWER BI`

Web & Social Media Manager (temporary)

Oct – Nov 2023

City Store, Dison (Liège)

- CRM data management and quality · campaign KPI tracking · SEO and website administration

Marketing & Sales Assistant (internship)

Sept 2022 – Jan 2023

Foodalix, Brussels

- Sales KPI reporting · customer base segmentation and qualification

PERSONAL PROJECTS · GITHUB.COM/ASTREETM

Belgian train punctuality, Databricks · PySpark, SQL, Delta, Auto Loader, Lakeflow Jobs
Medallion pipeline over more than 4 million train passages (Infrabel open data): incremental ingestion with Auto Loader, quality rules and quarantine in PySpark, star schema in SQL, a job triggered by each new file, and an AI/BI dashboard.

Analytical warehouse with automated tests, AdventureWorks · SQL Server, Python, pytest
Star schema over 172,000 rows, four analysis axes, 34 automated tests validating consistency and row-count traceability.

EDUCATION

Business Intelligence Consultant (training programme)
Technifutur & Cefora, Seraing (Liège)
Jan 2026 – June 2026
SQL · Python · Kimball modeling · Airflow · Power BI · team ETL project with Git

Bachelor's degree in E-Business / Digital Business
Haute École de la Province de Liège (HEPL)
Sept 2018 – Feb 2023
Databases · ERP & CRM · BPMN · Agile

LANGUAGES

French Native
English Intermediate (B1)

CERTIFICATION

Google Analytics IQ
July 2022
